## EU European Community Environmental Protection Directives

Declaration of Conformity with the Following Directives

WEEE - Waste Electrical and Electronic Equipment

This directive serves the purpose of

- Elimination of waste electrical and electronic equipment
- Reduction of waste quantities through re-utilization and collection-/recycling quotas

The products affected are mostly **movable** products for the private end-user: domestic appliances, electrical and electronic tools, games and recreational equipment and in part medical equipment.

Roland Electronic GmbH as manufacturer of automation components for **fixed** installations of machinery machinery and equipment (double sheet detectors, weld seam detection systems, quality assurance systems and similar) is therefore currently not affected by this Directive.

However the company makes every effort to meet the environmental aims of this Directive as much as possible.

RoHS -Restriction of the the Use of Certain Hazardous Substances

This Directive serves the purpose of reducing the content of hazardous substances in electrical and electronic equipment.

All products that could be converted to less hazardous substances (for example leadfree solder) have been converted. Products that cannot be converted will be successively removed from our product offering.

Roland Electronic GmbH

The Management
